

Enterprise Asset Management (EAM)

Increase safety and reduce the operational overhead associated with managing your organization's physical assets

Do you want to **improve performance and profitability** through the digitization of your asset maintenance processes?

How about making timely and accurate maintenance decisions based on **quality data** from across your assets?

Want to ensure complete handover documentation between functional teams to **reduce errors and avoid safety issues**?

Do you need to cut costs while **maintaining asset management compliance**?

Qellus solves the challenges associated with untrusted asset information. We use leading OpenText, SAP and EAM platforms combined with our extensive business expertise to optimize your asset management processes, reduce unplanned downtime, and lower maintenance costs.

For industries such as Energy, Oil & Gas, Utilities, Mining, and Life Sciences, performance and profitability are directly influenced by how efficiently assets are managed. To operate efficiently, organizations must be able to leverage information about enterprise assets across functional teams and be confident in the completeness of the asset and maintenance information residing in their Enterprise Asset Management (EAM) systems.

Realize the art of the possible

The best practice of Enterprise Asset Management is clear, but how do you turn that into meaningful changes for your organization? We partner with your teams on the ground to implement a new vision of what is possible. Our expertise in enterprise processes allows us to quickly get to the heart of your challenges and deliver outstanding results. We provide integrated asset management solutions and the technical know-how to implement them.

Optimize business processes and ensure compliance

Our expertise speeds up your implementation times and optimizes the right business processes, the first time. We simplify the process of collecting, storing, and sharing plant maintenance documentation and associating it with assets managed within leading applications such as SAP, Maximo and Infor. By increasing in-process collaboration related to work instructions and materials safety, you increase productivity while reducing regulatory and risks.

Why choose Qellus?

At Qellus we have decades of experience implementing SAP and OpenText solutions that facilitate content sharing and management supporting core ERP processes. Qellus extends your organization's knowledge of plant maintenance and engineering through our vast experience with information management. We do not only include asset data but introduce relevant content that is crucial to the management of your enterprise assets across procurement, plant maintenance, engineering, and your external business partners.

Our customers receive the missing link to increase the utilization of their ERP and EAM solutions. This drives meaningful change across organizations to reduce unplanned downtime, lower overall service, and maintenance costs, and increase the actual production rate.

We offer:

- Innovation and product leadership
- Functional, business and technical expertise
- Decades of expertise in SAP and OpenText

Benefits

Reduce downtime and shorten repair cycles thanks to years of functional expertise

Ensure safety and compliance by improving data access & consistency

Speed up implementation times and optimize business processes by getting right the first time

Increase participation across the lifecycle of content related to enterprise assets

Get the most out of your ERP and EAM solutions while increasing productivity
